The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.		
1. This communication is responsive to the response filed 12/11/2006.		
2. The allowed claim(s) is/are <u>1-18 and 22-34</u> .		
3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).		
a) ☐ All b) ☐ Some* c) ☐ None of the:		
Certified copies of the priority documents have been received.		
2. Certified copies of the priority documents have been received in Application No		
3. Copies of the certified copies of the priority documents have been received in this national stage application from the		
International Bureau (PCT Rule 17.2(a)).

## **DETAILED ACTION**

## Election/Restrictions

Claims 19 – 21 were withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Applicant timely traversed the restriction (election) requirement in the reply filed on 12/5/2005.

Claims 19 – 21 have been withdrawn from consideration.

## Allowable Subject Matter

Claims 1 - 18 and 22 - 34 are allowed.

The following is an examiner's statement of reasons for allowance:

Lee (U.S. Pat. No. 6,905,586 B2) teaches an apparatus and method for performing nucleic acid sequencing on a single molecule. Lee teaches the use of a tunneling current measurement and nanoelectrode-gated dielectric measurement for detection and sequencing (see, e.g., col. 9, line 34 – col. 11, line 37).

Flory (US 2004/0144658 A1) teaches an apparatus and method for identifying and sequencing a biopolymer translocating a nanopore. Flory teaches the use of a ramping or gradient bias potential (see, e.g., paragraph 33).

Regarding claim 1, the cited prior art neither teaches nor fairly suggests the sequencing method comprising the steps of: centering a fixed bias voltage across a pair of nanoelectrodes, wherein the bias voltage corresponds to an energy difference between any two energy levels of a molecule of interest; and further modulating the bias voltage with a modulation waveform.

Regarding claim 22, the cited prior art neither teach nor fairly suggest a sequencing system comprising: a signal generator configured to center a fixed bias voltage across a pair of

nanoelectrodes, wherein the bias voltage corresponds to an energy difference between any two energy levels of a molecule of interest; and to further modulate the bias voltage with a modulation waveform; a means for measuring tunneling current between the nanoelectrodes; and a signal processor for deriving an electrical signal indicative of the molecule of interest from the tunneling current and identifying the molecule of interest by comparing the derived electrical signal to known values of the molecule of interest.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Sines whose telephone number is (571) 272-1263. The examiner can normally be reached on Monday - Friday (11 AM - 8 PM EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
